FASTBAG™

The unique and revolutionary
FASTBAG permanently sets
the standard for the
new millennium

DESIGN PHILOSOPHY

FASTBAG™ is a brand new luggage system especially developed for ultra high speed touring. Although it fits all kinds of motorcycles, it is the sport and sport-touring bikes that will benefit mostly from its unique design and function. FASTBAG™ is designed to be practical in the every-day life as well as on longer tours.

FASTBAG™ offers the absolute cutting edge in wind tunnel technology, and state of the art design. This enables the rider to take full advantage of the bikes entire potential. Whether you're racing the open country road, tucking in behind the windscreen, or going flat out- totally nailing it on the highway, FASTBAG™ is the ultimate choice.

FASTBAG™ has been developed by Fastbag Norway AS in co-operation with the Norwegian National Institute of Technology.

AERODYNAMICS

The hard top of the FASTBAG™ is designed to smooth the turbulence created behind the drivers helmet and back. To optimise this effect the FASTBAG™ has undergone extensive wind tunnel testing, racetrack tests, and road tests on many different types and brands of bikes. The results of these tests show that in most cases the total aerodynamics may improve. This means that you will be able to achieve a higher top-speed, lowered fuel consumption, and increased stability by using the FASTBAG™, rather than riding without it.

LOCKING

When the FASTBAG™ is tied properly down on the bike, and the lid is locked, the FASTBAG™ can not be stolen without damaging the product itself. This due to the strap locking devices being hidden underneath the locked lid. In this case your insurance company will cover stolen property.

(Do specifically check your personal insurance agreement on this point)

FIRST AID KIT

FASTBAG™ is fitted with an easily removable waist bag containing a first aid kit. This kit may save lives in an accident.

BACKPACK

FASTBAG™ is designed to be used as a backpack when off the bike, allowing you to carry your luggage, having both arms free.

FLEXSYSTEM

The flexible, soft lower half of the FASTBAG™ allows the driver to expand the volume of the FASTBAG™ from 16 to 60 litres. The unique patented flex-function also means that the FASTBAG™ never is larger than it needs to be. The flexible luggage compartment is fitted with a luggage security device, that prevents luggage from rumbling around inside. The flex-part is made of PVC coated nylon fabric, allowing very easy cleaning.
